About This Game

Domino VR - A dream come true. Did you play a lot with dominos when you were young? We did too. That's why we decided to make this game. Domino VR is an easy to use domino simulator where you can build whatever you want. Make insane contraptions, create the next Domino Day. Whatever you can think of. Building and playing with dominos in VR is extremely fun.

The game is currently in a very basic state. That being said, it is quite fun to play. We will list what is currently in the game, what we are working on and what we plan to add.

Currently in the game

- Place dominos of various sizes, grab them and throw them around. Dominos spawn with a completely random color.
- Teleport around
- In-game menu where you can reset the world, enable/disable music and change (or disable gravity)
- Domino placing "cars" that you can let drive around the world and place dominos for you
- Various simple "things" you can use to interact with your dominos
- Basic sounds

-
- Color picker to change domino colors
 - Spectator camera to take screenshots or show spectators what you are doing
 - Menu on the left controller (currently only used for the color picker)
 - Weld tool to weld dominos together
 - Animatable camera

Being worked on

- Better weld tool and effects
- World decoration
- Objective oriented maps

Planned features

- Load/save worlds
- More and better decorated worlds
- Better sounds
- Better models
- Different game modes
- Steam workshop for worlds and models
